

The Science of Thinking

Scientists think the brain is divided into two systems.

The fast system, System 1, is related to your _____ memory while the slow system,

System 2, is related to your _____ memory.

Your brain can only deal with _____ novel things at one time.

The process of grouping things together based on prior knowledge is called _____ which allows the brain to deal with large amounts of data at one time.

Explain how learning is related to chunking.

Why is it important to learn “by hand” or practice over and over again instead of looking things up on Google all the time?

Drew will always try to avoid work because he is trying to conserve resources. What is one way you can force Drew to get to work?
